

Technical Data Sheet

Mould Cleaning Wipes

Revision : Orig
Date : May 2023

Product Description

Mould Cleaning Wipes are a blend of organic solvents designed to remove dirt, grease and contaminants from a mould surface. The product is particularly efficient at removing silicone, wax or other types of build-up on the mould. Mould Cleaning Wipes are designed not to soften or dull mould materials (such as GRP).

Application:

- 1) Wipe over mould surface covering an area of approximately 0.5m².
- 2) With a second dry cloth, wipe off the wet film. Do not allow the wet film to dry before wiping off as this will simply re-deposit contaminants picked-up by the solvent. Continue wiping until the mould surface is dry.
- 3) Repeat steps 1-3 on the adjacent area. Ensure a good overlap with the previous area to ensure the entire mould surface is cleaned.
- 4) If either cloth becomes dirty, or if the second cloth becomes wet, replace with a fresh cloth and repeat steps 1-4.
- 5) Repeat until mould is completely cleaned.

The wipes are conveniently packaged in a dispensing tub which is foil sealed to give an extended shelf life of up to 2 years.

Typical Product Data & Physical Properties

Appearance	Solid, white
Purity	99.8%
Relative density @ 20°C	0.805-0.825 g/cm ²
Boiling point	79°-190°C
Water content	0%
Flash point	-4°C
Water miscibility	Complete
TLV	400ppm
Vapour pressure @20°C	105 hPa
Evaporation rate	<1
Shelflife	2 years
Melting point	-90°C
Auto ignition	Not self igniting

Base Fabric Data

Colour	White
Type	Spunlace
Composition	Viscose/rayon
Base weight	68gsm
Tensile strength at Fmax	
MD	74N/5cm
CD	14N/5cm
Elongation at Fmax	
MD	70%
CD	85%

Availability : 30gsm PP 100 sheet
40gsmPP 200 sheet
68gsm viscose/rayon
75 sheet/100 sheet
Sheet size 20cmx20cm

Compatibility
IPA presaturated wipes are compatible with most materials although full compatibility must be tested in an inconspicuous area prior to use.

Usage Instructions
For professional use only
Always refer to the MSDS

Note
